Sources

To remove the lines in Excel before saving to PDF, turn off **Print Gridlines** for that sheet. Go to **Page Layout** → **Sheet Options** → under **Gridlines**, uncheck **Print**. ¹

If the lines are page-break guides instead of gridlines, go to **File** → **Options** → **Advanced** → under **Display options for this worksheet**, uncheck **Show page breaks**. ²

A quick check:

- **Gridlines in the PDF:** uncheck **Print** under Gridlines. ¹
- **Blue/gray page-break lines on the sheet:** uncheck **Show page breaks**. ²
- **If you want cell boxes:** add borders to the cells instead of relying on gridlines. ⁷
